WOOF PAPER(V1.0)

WWW.FILEDOGE.IO

INTRODUCTION

The crypto world is decentralized.

+

=

We are obsessed with Bitcoin because of its revolution in decentralized finance. We are obsessed with Ethereum because of its revolution in decentralized operating systems. We are obsessed with SHIB because of its revolution in decentralized communities.

While we have seen the revolutionary fires that have been lit in many fields, storage, as the bottom building block of the decentralized world, seems not to be under the spotlight. What can we do then?

But the good news is, the world of storage is quietly changing.

On November 28, 2022, Filecoin officially announced the launch of FVM, introducing the programmability of smart contracts to the Filecoin network.

On February 17, 2023, Filecoin officially announced that the launch of smart contracts is scheduled in March, making Filecoin a full-fledged LAY1 public chain.

Thus, the journey of FILEDOGE is an answer to a simple question:

What sparks would a FIL-based cryptocurrency project have if it is 100% decentralized and initiated by the community?

WHY CHOOSE FIL?

In fact, as POC enthusiasts, when comparing different Layer 1 public chains, FILEDOGE legion has its own choice based on its preferences and comprehensive consideration.

Our founder Fredrick is a fan of BTC, ETH and also FIL. We chose FIL because its FVM is fully compatible with EVM, making FIL as safe and sound as ETH. FIL also has an incomparable strength in storage, allowing the community to remain continuously decentralized.

The FILEDOGE legion enthusiasts are convinced that with the launch of the FVM, countless smart contract-based eco-applications will blossom on FIL. FILEDOGE will be the most entertaining and adventurous application on FIL.

Our community has taken a bold and crazy move. **We put 44% of the supply in the Swap pool on FIL for fair distribution on Genesis, airdrop 15% of the supply to all FIL holders and 1% to members of communities such as Discord, and send 20% of the supply to the official Filecoin lab's wallet and the remaining 20% to Vitalik's wallet.**

Yes, it's a fair social experiment. **We are creating the first meme token on Filecoin.** There are no centralized teams but only a level playing field that welcomes everyone.

The community members of FILEDOGE legion are a bunch of adventurous lunatics, shouting "EAT ZERO OR RETURN TO ZERO!"

WHY DECENTRALIZATION?

Many people regard "decentralized" and "distributed" as synonyms - but they're not. No matter how the views about Bitcoin have led you to believe in this so far, they're not the same thing. "Decentralized" means not to be controlled by a single entity, while "distributed" means scattering.

While all beginnings in human history came from centralized organizations that are efficient and tightly organized and have played an important role in history in the form of centralized governments, educational institutions, social applications, financial systems, and others that intervene in our daily lives, Bitcoin seems to give us an opportunity to think about a new form of organization, as embedded in the Bitcoin genesis block - "The Times 03/Jan/2009 Chancellor on brink of second bailout for banks."

We also have to thank Musk. After he took over Twitter, we can see that the government is increasingly tightly controlling public opinion and censorship. But here also comes the question: if storage is not decentralized, then what about storage-based economic models, computer operating systems, social applications, and community building? Can they all be classified as distributed?

We are in the era of the great crypto voyage and dream of reaching the other side of decentralization, which is our original intention - to initiate the 100% decentralized crypto project FILEDOGE through the community.

FILEDOGE COMMUNITY

The Bitcoin legion loves decentralization, and also loves meme culture.

In the Web 2.0 era, memes came into the spotlight, representing different cultural phenomena and showing us the magic power of communication that content from popular culture or subculture has.

While in the era of Web 3.0, the combination of memes, decentralization, and crypto is going viral in the world, which is a new form out of the traditional narratives. As a new way to gain the right to speak, it allows everyone to participate in creating a shared culture, and is a passport to the new world.

Thus, a group of community members with the same dream came together and launched the FILEDOGE project.

Based on FIL's smart contract, the FILEDOGE project made its fair release of Genesis. It is a 100% community-based project dedicated to bringing the spirit of DOGE's meme culture to the FIL ecology and beyond.

FILEDOGE legion is an innovative, adventurous, and talented community team. Although the R&D team, marketing personnel, designers, country managers, and administrators have not worked together before, the close collaboration within the FILEDOGE legion has allowed the initial dream to gradually come true. This is also an extremely open and inclusive community where you can:

1. Join a community of crazy people who love memes and decentralization, and go crazy with them!
2. Show your great talent no matter who you are and where you come from!
3. Be brave and create everything! It's a social experiment that starts from zero, show your great courage!

FILEDOGE

INFORMATION

FILEDOGE engineers have finished building the token contract on the FIL testnet and will officially release the native token FIL after the contract goes online. At the same time, the entire source code of the FILEDOGE community will be published on GitHub.

FILEDOGE has successfully **fair launched on April 3rd, 2023 at 12:00 (UTC)** with a participation of more than 4,000 individuals. As of now, its price has **surged by 150X** and the number of holders has exceeded 20,000

Token Name : FILEDOGE

Symbol : FILEDOGE

Max Supply : 1,000,000,000,000,000

Type : ERC20 on Fil

Website : <https://www.filedoge.io>

Twitter : @Filedogetoken

Discord : <https://discord.gg/filedoge>

FILEDOGE

ALLOCATION

FILEDOGE adopts a Fair Launch mechanism in the community, where everyone is on the same starting line. The founding team owns 0 coins. Like all other community members, they can only buy coins on the marketplace. The overall decentralized genesis scheme is as follows:

1. **44% of the total supply enters the Swap pool of FILEDOGE with corresponding private keys destroyed for fair genesis.**

After the official release of the FIL smart contract, the FILEDOGE/FIL trading pair will be added to the DEX of Swap, along with a liquidity pool of 440 trillion FILEDOGE and 1,000 FIL. The corresponding private keys will be destroyed.

2. **15% of the total supply is airdropped to FIL holders in proportion to their holdings.**

The community will take a snapshot of FIL holders' positions at a certain time, and deploy the smart contract for token airdrops. FIL holders can get the airdrops of FILEDOGE through the contract in proportion to their holdings.

3. **1% of the total supply is airdropped to Discord community members.**

The FILEDOGE legion has always been a big fan of Discord. To motivate community members, this portion of airdrop will be given to the first 100,000 community members.

4. **20% of the total supply will be sent to the official Filecoin lab's wallet for "Burning".**

FILEDOGE is an important part of FIL's ecology. As FILEDOGE's founder Fredrick indicated, "20% of the FILEDOGE supply will be sent to the lab as we believe that the lab will firmly stick to the concept of decentralization without violating any regulations, and will actively "burning " or properly manage the token."

5. **20% of the total supply will be sent to Vitalik's wallet on FIL for "Burning".**

As a tribute to Vitalik's great contribution to smart contract and ETH, when FVM is compatible with EVM, this portion of the tokens will be sent to Vitalik's wallet on FIL. If the delivery fails, these tokens will be forwarded to the official Filecoin lab's wallet as well.

FILEDOGE'S ZERO

As mentioned earlier, FILEDOGE is a fully decentralized experiment initiated by a large group of crypto-nuts.

In February 2023, FILEDOGE was born.

After coining 1,000 trillion tokens, we give 60% to the community and the remaining 40% to Filecoin Lab and Vitalik for "Burning". That's where the FILEDOGE project started.

So FILEDOGE is a social experiment starting from scratch, everything is starting from zero.

start from zero;

return to zero;

eat zero;

from zero to zero;

everything is zero;

This is a fair social experiment. The Genesis team owns 0 tokens. To own the token, the members must buy on the marketplace themselves. This also means that no team members will spend a single penny on the listing of FILEDOGE, as our slogan said EAT ZERO OR RETURN TO ZERO!.

ROADMAP

As a decentralized cryptocurrency project, there is no centralized team deciding the future development of FILEDOGE. Everything is left to the community. What journey FILEDOGE will eventually take is a topic to be imagined. Let's imagine:

1. Create a DEX, we have **already launched** it and you can access it at

<https://www.filedoge.io/swap>. As designed, 5/6 of the fees in the DEX will be used as rewards for liquidity providers, while 1/6 will be used as income for FILEDOGE holders, which will be used for repurchasing FILEDOGE to boost the coin price and move into a **deflationary** state.

2. After the fair launch was completed, due to the rise in coin price, there were still 80 trillion FILEDOGE tokens that were planned to be added to the liquidity pool. In order to distribute these tokens fairly to the community members, we developed the **farm** function. By adding liquidity and staking LP tokens, you can earn **additional farm rewards** in addition to **receiving 5/6 of the DEX trading fees**. The farm output time is consistent with the filecoin block generation time, which is **30 seconds per block**. The reward comes from the remaining tokens after the launch. The farm function is now live and available at

<https://www.filedoge.io/swap/#/farm>.

3. FILEDOGE legion members are super passionate gamers. As a meme cryptocurrency project, FILEDOGE is a good birthplace of games.

3. Games are naturally linked with NFTs. FILEDOGE, which comes with the attributes of meme culture, has its own advantage in the field of NFTs.

5. Other possibilities? Feel free to think about it...

As already mentioned, we can now think as much as we can about the future course of FILEDOGE. **Ultimately, however, everything will be left to the community to determine the future.**
